

POWER SUPPLY AUDIO ALARM CONTROL SYSTEM

Abstract of the Disclosure

Methods and systems are provided for controlling the enabling and/or disabling of an audio alarm that indicates an occurrence of a predetermined event of a power supply, such as an uninterruptible power supply (UPS). In one embodiment of the invention, the method includes programming the UPS to enable the audio alarm of the power supply

- 5 during a first predetermined time period, and programming the UPS to disable the audio alarm of the power supply while the power supply is still operational during a second predetermined time period. In embodiments of the invention, the system is able to enable and disable an audio alarm during specified time periods of the day. Thus, a user can use the system to designate when an alarm will not sound so as not to disturb the user or
- 10 others at an inconvenient time.
